PROFILE SUMMARY

Versatile Software Engineer blending full-stack web development with AI-powered automation. Passionate about building clean React interfaces, engineering RAG document retrieval systems, and streamlining cloud workflows to drive immediate operational efficiency.

SKILLS

- **Programming Languages:** JavaScript, TypeScript, Python, Java, C#, HTML, CSS
- **Frameworks & Libraries:** React, Next.js, Django, Laravel, .NET MVC, TailwindCSS
- **AI & Automation:** Retrieval-Augmented Generation (RAG), Vertex AI Agent, Google AppSheet, Google Agent Development Kit, Claude Code
- **Cloud & Databases:** PostgreSQL, Supabase, Google Firebase, Google Cloud Project
- **Engineering Practices & Architecture:** Full-Stack Development, Software Development Life Cycle (SDLC), Agile/Scrum, Git Version Control, Docker
- **Business Analysis & Strategy:** Requirements Gathering, Technical Negotiation

WORK EXPERIENCE

Malaysian Resources Corporation Berhad (MRCB)

March 2026 - Present

AI Engineer | Protege

- Architected and deployed an agentic RAG chatbot to production, accelerating admin document lookup times by 98% (from 10 mins to 10 secs), by containerizing a Gemini 2.5 Flash and PostgreSQL/pgvector stack with Docker to seamlessly transition code from development to production environments.
- Achieved >85% system accuracy across bilingual English and Malay queries by gathering precise User and Software Requirements Specifications (URS/SRS) to define project scope, and engineering a custom LLM-as-a-judge semantic evaluation harness for strict pre-release benchmarking.
- Cut form processing time from 3 days to 3 hours by designing and deploying digitalized approval workflows via Google AppSheet, completely eliminating legacy physical signature bottlenecks.

Airflo Systems Enterprise

December 2025

Frontend Website Developer (Freelance)

- Designed and developed a responsive frontend website to showcase ventilation engineering services with a clean, professional UI aligned to industry standards, improving user experiences.

Cloudbreakr (Advwhere Sdn Bhd)

July 2025 - October 2025

Junior Software Developer

- Constructed new features in a Laravel + React web app, including a Instagram data crawler that integrates with an external scraper API, enhancing influencer discovery and ensuring the best selection by improving data accuracy and availability by 70%.

Software Developer Intern

Dec 2024 - June 2025

- Developed and maintained an internal campaign management web app using React, Redux, and TailwindCSS, enhancing UI/UX and improving user task completion (from 24 hours to 3 hours) while collaborating with 3 cross-functional teammates in Scrum sprints.
- Debugged and fixed 15+ frontend and backend issues across 3 major features, contributing to 2 successful release cycles.

Part-time Retail Assistant
KF ORIENTAL FOOD SUPERMARKET, Lancaster, UK

Dec 2021 - Feb 2023

- Managed inventory restocking and handled 100+ customer transactions per shift while balancing 16 hours of part-time shifts per week alongside full-time university studies.
-

EDUCATION

BSc(Hons) Software Engineering with 2:1 Upper Second Class
(equivalent to 3.45 CGPA)

Sep 2021 - Aug 2024

Lancaster University, United Kingdom

- Scholarship recipient - Jabatan Perkhidmatan Awam (JPA) Malaysia

A-Level & IELTS Band 7.0 with CEFR Level C1

Jun 2020 - Jun 2021

Kolej Teknologi Timur, Malaysia

Malaysian Certificate of Education (5A+, 4A)

Feb 2017 - Dec 2018

MRSM Tun Ghafar Baba, Malaysia

PROJECTS

Domain-Based IoT Sensor System with Microbit (Lancaster University)

Tools: Microbit, React Framework, Javascript, Java, Amazon RDS

- Built a Microbit-based IoT monitoring system to track room conditions and user activity in real time, addressing safety and efficiency challenges in domains like prisons, schools, and hotels through features like emergency alerts, access control, and interactive visualisations.
- Collaborated with backend dev to simulate alert testing for threshold events (e.g. proximity breach alarm and emergency alarm).
